Subject: Three week update 10-11-2016

On October 10, 2016 DEQ received the most recent update from Carl Burnham of IRS Environmental regarding the quantity of Asbestos material removed from the CFAC site to date. A current cumulative total of 67,960 pounds of regulated asbestos waste has been removed from the facility(an increase of 3,480 pounds since September). The waste disposal receipts for September indicate the removal of an additional 109,180 pounds of non-regulated asbestos material, yielding a “to date” non-regulated asbestos total of 995,190 pounds. Structures included in this removal include the West Rectifier, Rod Mill Building, Paste Plant, Quonset Hut, West Aluminum Unloader, Compressor Building, and Laboratory.

An asbestos project permit is in place through 2016 for the East Rectifier building and through October for the building 1 complex. A project permit application has been received for the “Change House” and is being processed. Demolition notifications remain in place for the East and West Rectifiers, Rod Mill Building, Laboratory Building and Building 1 complex.
